

Unveiling Excellence

# A Report on Environmental Promotional Activities (Beyond the Campus)

GEOTAGGED PHOTOS

University of Science & Technology Meghalaya

Promoting environmental awareness is considered a crucial goal in the context of contemporary education. The importance of this goal lies in the interdependence between humankind and the natural world. Nature defines both our existence and our relationship with the world at large, then the development of environmental awareness can help change our relationship with Nature, and thus promote a more responsible behaviour toward, and even respect for, it. However, fostering the development of that relationship can also promote environmental awareness. University of Science & Technology, Meghalaya (USTM) systematically aligns its environmental promotional activities with qualitative targets such as commitment to climate and environmental protection.

USTM tries to inculcate these values in all its students in the university campus and beyond. All the departments of USTM has adopted many villages and organize many awareness camps and drives for the same.

Some of the Activities conducted by USTM beyond the campus are cited below:

*Awareness Rally on the occasion of World Environment Day, 05th June, 2014*
